A multi Rae is a 5 gas monitor with interchangeable sensors. The typical configuration is for LEL, O2, CO, VOCs, and H2S. At West Fertilizer we swapped sensors and had Ammonia instead of H2S.

From a presentation I did:

MultiRAE Plus – microprocessor controlled, active sampling pump. Fitted with H2S and CO toxic gas electrochemical sensors. Also has O2, LEL electrochemical sensors  
Equipped with a 10.6 eV Photoionization Detector lamp for monitoring VOCs (in isobutylene equivalents)

The MultiRae PROs have radiation monitoring capabilities. Gamma I believe

I'm not sure what the first one is (on the left). Honestly, it looks like a GPS. The second from the left is a MultiRae PRO. The third from the left is a MultiRae Plus. The red one on the right is an UltraRae. All are RAE Systems air monitoring instruments.

Does that help
